DEUR

**Added value for  
horticultural companies.**

**MeerDeur.  
Added value  
for horticultural  
companies.**

A lot of demands are put on doors in greenhouse horticultural companies. Functionality is of the greatest importance, and doors have to stand up to years of use. If the door is in a prominent location in the company, then its appearance is very important. And with automatic doors, operational reliability and safety are additional factors that have to be considered. Which supplier specialises in greenhouse horticultural companies? MeerDeur. We have been specialising in automatic doors for greenhouse horticultural companies for years. With a complete range of doors, automatic door operators, speed roller doors and lifting panels, there's just one solution for each situation: the best one for you.

No two doors are the same: the dimensions and construction requirements of each door vary. It is important to know that MeerDeur can handle the entire process itself from design and engineering through to installation of your door. So you are guaranteed made-to-measure service and a wide range of choice of systems. MeerDeur has its own production unit that has been designed for producing all types of doors. Using aluminium profiles gives form to your door.

### **Automatic doors available as well**

In a lot of companies, doors play an important role in closing off an area. If products are moved back and forth, the door has to be able to open and close quickly: after all, time is money. With the Gatemaster® door operators, the door is no longer an obstacle, and employees have unhindered access. Furthermore, opening and closing speeds can be adjusted to minimise energy loss. This efficiency goes hand in hand with maximum safety: sensor systems detect when it is not possible to close the door. With a Gatemaster® door operator, you have guaranteed performance for years to come. The automatic systems are designed for years of use and, equally important, are very robust. For demanding applications such as cold room doors, MeerDeur has an ideal drive as well: the Gatemaster® Heavy Duty. In the event of a power failure, you will still have access to your premises because you can easily switch to the battery system or manual operation as required. Finally, the optional service contract will ensure years of problem-free use.

### **Speeddoor® speed roller doors**

Are you looking for maximum functionality? The Speeddoor® speed roller door is the ideal means of closure between two areas that have to remain physically separated from each other as much as possible. The system consists of a door plate fitted with horizontal bands of plastic sheet that have been strengthened with polyester. The electric drive ensures fast opening and closing. The sides are made standardly from aluminium profiles, and the bottom profile is fitted with a rubber impact section. The system is maintenance friendly and so robust that minor bumps shouldn't be a problem. Even power failures won't stop the doors from operating. The manual operation option guarantees accessibility under all conditions.

### **Efficient lifting panels**

Do you have a greenhouse with different temperatures between two areas? Then the MeerDeur lifting panels are ideal for your situation.

They can create an opening quickly and without losing costly energy. Lifting panels offer a solution commonly applied in companies that make use of internal transport systems. They may also come in handy when conditions on the ground preclude a sliding application.

### **A partner that understands your business**

MeerDeur is a respected partner that fulfils its agreements and also has a healthy element of built-in flexibility in order to accommodate planning changes efficiently. You always have access to a specialist who understands business: your business. Would you like to receive more information without any obligation? At MeerDeur the door is always open.
