**Added value for
shop doors.**

MeerDeur. Added value for shop doors.

As a retailer, you do everything you can to increase footfall. You provide good products, correct pricing and service-oriented personnel. The entrance door also plays an important part since it is the customers' first impression of your shop. Which supplier is ready and able to translate your needs and requirements into an optimum door? MeerDeur. Our name says it all: we are a supplier that also provides added value for your shop's door.

The competition for consumers is becoming increasingly intense, and in this arena it's important to keep the entry threshold as low as possible – both literally and figuratively. A door isn't specifically the crowning aspect of your shop, but as an essential part of your shopfront, it helps determine your shop's appearance. The door has to be an invitation to pop in while also meeting all of your functional requirements.

Own production unit

MeerDeur specialises in the retail sector. In numerous shops throughout the Netherlands, our doors offer a warm welcome to passers-by in shopping streets. MeerDeur produces every door itself in its own modern production unit with all conceivable facilities.

As we have our own manufacturing facilities, we can cater to varying needs faster since no two doors are the same. A door represents a shop and thus has unique requirements - the entrance to an exclusive shop requires a different approach to that for a budget shop. Furthermore, the construction situation also varies.

Knowledge of retail matters

At MeerDeur you always have a specialist available who can put you on the right track, in close cooperation with your own architect or structural engineer if you wish. Using aluminium as the basic material makes a multitude of applications possible; it is a low maintenance material that is light and robust. You can leave the entire process of design, engineering, manufacturing and installation to MeerDeur with complete confidence. We are an agreeable partner to work with in the construction process of both new buildings and renovations.

Automatic models available as well

In many cases, an automatic door will be an attractive choice. MeerDeur uses Gatemaster® drives, door operators that are known for combining ease of use and operational reliability. An automatic door gives an important added value to any building.

Safety first

It goes without saying that the Gatemaster® is also designed for maximum safety. The system can detect any obstacles that make closing impossible. The door then returns safely to its open position, and the following closing cycle will be at a slower speed. Do you need more assurance? The Gatemaster® automatic drives can be fitted with additional safety features. You will still have normal access to your premises in the event of a power failure.

Under such circumstances you can switch to the optional battery pack or manual door operation if required. To guarantee years of problem-free use, there is the option of arranging a service contract.

A partner that understands your business

MeerDeur is a partner that fulfils its agreements and also has a healthy element of built-in flexibility to accommodate planning changes efficiently. You always have access to a specialist who understands business: your business. Would you like to receive more information without any obligation? At MeerDeur the door is always open.
